# STONEPEAK THROUGH THE YEARS

**2004**

StonePeak opens, providing Italian Style, Made in the USA.

**2005**

First US manufacturing facility capable of producing through-body tile with through-body veins. First US company to produce unglazed products bigger than 12"x12".

**2006**

Introduction of a 3rd kiln, bringing the factory capacity to 70,000,000/sf per year.

**2007**

New glazing technology stabilizes StonePeak's shading process, substantially increasing the quality of production.

**2008**

First US manufacturer capable of producing Active Technology, tiles with anti-microbial characteristics.

**2009**

**Green = Saving**

implemented as a new motto for the company. Product development focuses on recycling and investments made for more environmentally sustainable products.

**2010**

First US tile manufacturer to use InkJet technology—a game changer in the tile industry.

## 2020

First time producing 12mm thick panels from our Large Panels production line.

## 2022

First time to produce textured finish thanks to two dedicated technologies, one of which is the innovative 3D Printing technology, which acts on the surface of the tile by creating a structured product.

## 2018

Factory opens new line. First US tile manufacturer to produce 120"x60" and first line to produce gauged panels and regular field tile on the same machine.

## 2013

First US tile manufacturer to introduce 5'x10', ¼-inch thick porcelain panels to the market—starting a tile revolution.

## 2015

Factory expansion increases production by 30%.

## 2021

First production of 48x48" sized material from our Large Panels production line.

---

**Nestled in the hills of Tennessee's Smoky Mountains, StonePeak Ceramics Inc. is a company with a uniquely American character that has honored the time-proven tradition of fine Italian porcelain ceramics since 2005.**

---

# ITALIAN STYLE, MADE IN THE USA

StonePeak combines over 50 years of experience with the most advanced technologies in the industry to create products of the highest aesthetic quality and technological performance.

Imagination, inventiveness, precision and ingenuity are the key components that drive our leaders' commitment to finding new ways of meeting customers' demands. These are the key principles by which we create the innovative products that make StonePeak the industry trailblazer it is today. The 2010 introduction of Inkjet technology, and the 2018 opening of the first large panel production line in the USA are just a few highlights in the list of firsts for our organization.

The character of our company also extends to our operations. For us, it's all about achieving the perfect balance: a harmony between a hard-working team devoted to satisfying our customers and a company committed to making quality tile.

Not so long ago, we envisioned just such a company—one that would bring together the finest products and style at a place that's all about people: the clients we serve, the members of our team and the families who live in our community. Out of that vision emerged a new way of doing business—a refreshing change in the ceramics industry.

**Welcome to StonePeak—Italian Style, Made in the USA.**

# THE PRODUCT & PRODUCTION PROCESS

## The Product

StonePeak Ceramics manufactures exclusively high-quality porcelain tile. The term “porcelain tile” is defined by American National Standard as ceramic products with 0.5% or less of water absorption (ANSI A137.1).

## The Production Process

StonePeak porcelain tile is made of 100% natural components. After a high-tech production process, the material reaches its outstanding characteristics of hardness, strength and durability, while keeping its natural appearance.

Most **raw materials** are located within 500 miles of StonePeak’s facility. After arriving at the factory from the quarries, the materials are transferred to large cylindrical containers: the mills. In the mills, they are ground and mixed with water in order to obtain the slurry required for pressing. This wet-grinding process produces fine particles, which are important in developing a dense, homogeneous structure during firing.

**Spray-drying** is an important stage in the porcelain manufacturing process. In the spray driers, the slurry is injected at a high pressure into an air cyclone with a very high internal temperature, causing instantaneous evaporation. The spray dryer produces rounded granules that have the water content and particle size suitable for pressing. The spray-dried powders are removed from the lower part of the drying chamber.

The spray-dried powders are stored in individual silos until the control board specifies the exact materials required for each product recipe. Every color in the StonePeak collections has a special, **secret recipe** developed by the Research and Development Department.

The **silos-stored** powders are mixed to combine different atomized particles to produce a chemically and physically homogeneous material for forming. An automated system mixes the different colors to create the blend needed to produce a specific product.

**Pressing** is the shaping process used for porcelain tile. The press makes the material a consistent thickness and surface.

**A moving truck feeds the dyes with the body mixture.**

**The presses work in two phases:**

1. Air is removed from inside the sprayed body.
2. A pressure of more than 7500 PSI is used to compact each round-shaped particle in the body.

Uniform pressure is exerted over the entire tile, ensuring lower shrinkage during subsequent firing stages.

The **drying** operation is important to eliminate all moisture from the pressed products. In general, the conditions under which the moisture is removed from the tile are critical to ensuring the integrity of the product. Therefore, these conditions must be rigorously controlled to prevent distortions, cracking and other damages.

The fast, hot vertical air dryers are used to heat the material, which promotes diffusion of the water from the interior of the tile to the surface. The air dryers also aid in the evaporation and transportation of the water from the tile surface.

**Firing** is the last and most delicate stage of the production process.

Through firing, porcelain achieves its exceptional mechanical characteristics and the properties of chemical inertia. Porcelain tiles are fired in kilns that they pass through on rollers.

The firing temperature inside the kiln is critical to producing a good product, and it can reach more than **2200°F**.

Once fired, tiles are rapidly cooled by fans. Then, they are sorted, packed and ready to be shipped.

RAW MATERIALS

SPRAY DRYERS

AIR DRYERS

MILLS

SILOS FOR STORAGE

KILN

PRESS

# THE TECHNOLOGIES

## THRU-COLOR

The color runs through the tile's thickness for enhanced surface wear resistance, which makes it perfect for high-traffic areas.

## GLAZED

A subtle glazed surface provides the easiest maintenance for residential and light-commercial applications.

## INKJET

The most detailed imaging perfectly replicates the beauty of natural material; however, Inkjet porcelain outperforms natural material.

## GAUGED PANEL TECHNOLOGY

StonePeak Ceramics is the first and only US tile manufacturer to produce large format porcelain panels ranging in thickness from 6mm to 20mm.

# THE FINISHES

## Exclusive StonePeak Finishes: Polished/Glossy, Lappato, Honed/Matte, Textured

StonePeak's high-tech polishing techniques create a range of finishes that give its tile distinctive looks for a variety of uses. The shiny, mirror-like appearance of the polished finish is achieved using a special stone head that polishes the tile. Glossy wall tile, on the other hand, gets its sheen from a shiny glaze and does not get polished on the polishing line. Elegantly uneven, the lappato finish is rendered with a specially-shaped resin, while textured tile is pressed into the desired shape and pattern. An InkJet printer is used to apply a non-shiny glaze to honed or matte tile, giving it a flat finish that does not reflect light.

The below images show how each finish reflects direct light:

# STONEPEAK & THE ENVIRONMENT

StonePeak Ceramics leads the American tile industry in sustainability. The company continually works to create a higher environmental standard, striving to lower its carbon footprint and create the most sustainable products possible. Constantly evaluating its footprint on the environment and looking for technological advancements to improve sustainability, StonePeak ensures that customers get the most ecofriendly porcelain tile on the market.

## WHAT MAKES STONEPEAK PRODUCTS SUSTAINABLE?

StonePeak products are made from natural ingredients and are free from harmful chemicals, resulting in environmentally responsible, healthy materials.

- Made with 100% natural minerals, including quartz, clay, kaolin, feldspar, silica and natural coloring agents.
- Do not contain sealants, waxes, epoxies, man-made binders and artificial coloring agents.
- Help reduce overall off gassing by not containing volatile organic compounds (VOCs).

## HOW IS STONEPEAK EVOLVING ITS SUSTAINABLE PRACTICES?

To use less energy and water and produce less waste, StonePeak introduced an innovative formula that utilizes raw materials found in the US. This produces a greener generation of products that is completely American-made.

### Features of these products include:

- Recycled paper for all packaging
- Reduced average box weight
- Post-consumer recycled content of 6% for all American-made products

## MANUFACTURING SUSTAINABILITY

StonePeak's state-of-the-art manufacturing facility employs environmentally friendly practices throughout its production process, and the company's commitment to sustainability resonates through its products.

- **Production facility:** a nearly closed-loop process that recycles almost all raw materials and water waste back into the production cycle.
- **Antipollution Devices:** exceed the minimum standards required by law, including smoke depurators, sand depurators, water purifiers, reutilization of heat from the kilns and reutilization of production losses.
- **Packaging:** recycled materials whenever possible.

SYMBOLS	ATTRIBUTE	ADVANTAGE
	Post-consumer content of 6% recycled glass	All US-made materials, Bureau Veritas certified
	Pre-consumer content of minimum 40% recycled materials	Some materials, Bureau Veritas certified
	Source of raw material within 500 mile radius	All US-made materials
	GREENGUARD® Certification verifies that products meet some of the most stringent air emission standards	All US-made materials
 thickness	Thickness of <9mm	Lighter weight material for transportation, less raw materials, energy efficient
	InkJet technology	Less waste, less glaze, energy efficient
	Non rectified/line-cut	Less waste, energy efficient
	Source of collective information on product details including LEED info, ingredients & certifications	Higher transparency & product sustainability
	Tile Council of North America's sustainability certification	All US-made products
	Evaluates products against all the major environmental rating systems	Details energy efficiency and healthy environments

For more information on why porcelain tile is the best flooring solution visit: [www.whytile.com](http://www.whytile.com).

# STONEPEAK ENGINEERING

## **STONEPEAK ENGINEERING OFFERS VENTILATED FACADE SYSTEMS**

Using state-of-the-art technologies and partnering with innovative systems, StonePeak Engineering develops top architectural solutions for any project. Our Engineering division services projects from drawings, material specifications, installation, through completion.

# EXTERIOR VENTILATED SYSTEMS

## Ventilated Façade System (VFS)

Porcelain tile rainscreen applications have been widely used throughout Europe for over two decades. The porcelain rainscreen, or correctly referred to as a **Ventilated Façade System (VFS)**, is an exterior choice for buildings which combines the aesthetic appeal of porcelain slabs with excellent thermal performance.

From a structural point of view, L-brackets are attached to the building envelope and extend outward from the building. This accommodates the different types of exterior thermal insulation and creates a cavity for airflow to the extruded aluminium sub-frame. Using this construction technique, the surface of the open porcelain façade cladding system remains separate from the building structure.

The resulting cavity is partially filled with a layer of thermal insulation leaving the rest of the cavity empty to allow ventilation. This continuous flow of air provides significant benefits in terms of breathability and reducing thermal bridging—thus making the building more energy efficient.

### Advantages of Exterior Ventilated Systems include:

- Exterior engineered to last;
- Elimination of the risk of cracked covering;
- Elimination of the risk of detachment;
- Protection against the direct effect of weather;
- Elimination of thermal bridging. The open joints in the porcelain tile (VFS) allows pressure equalization inside the air cavity and allows for air to circulate between the VFS and the building envelop, preventing water from being drawn into the building;
- Elimination of surface condensation (the presence of an air gap facilitates evacuation of water stream from the interior and promotes the removal of possible moisture);
- Lasting efficiency of the outer insulating material, which is kept perfectly dry thanks to excellent ventilation;
- Easy on-site installation regardless of the climate conditions;
- Maintenance and work can be carried out on individual tiles;
- Creation of a technical working space for pipe and duct housing;
- Energy efficient because insulation on the outside of the building walls saves energy and satisfies California Article 21;
- Contractor-friendly installation and maintenance process.

## GHS – Keil Concealed Undercut Anchors System

The GHS undercut anchor system uses horizontal rails, which are attached to the vertical T-Profiles and the L-Brackets.

C-Brackets fastened to the tile, with the keil concealed undercut anchor, transfer the load of the tile onto the sub-frame.

GHS System is used with 8mm and 10mm thick porcelain slabs.

# GHL LARGE EXTERIOR VENTILATED SYSTEM

## GHL—Structural Silicon Adhesion System

- Structural silicon is used in lieu of traditional mechanical anchors to adhere the 60"x120", 6mm thick porcelain slabs.
- The cut-to-size slabs are fabricated at the factory and shipped to the jobsite with the structural support frame already adhered.
- C-brackets are screwed to the aluminum structural beams, which attach the slabs to the sub-frame horizontal rails located on the aluminum sub-frame.

GHL Large system has been specifically created for the StonePeak **PLANE** collection. This concealed anchoring system is customized for modular 60"x120" large porcelain panels eliminating all site operations, other than mechanical anchoring. The **PLANE** GHL system is therefore ready to be "simply" hooked and tightened to the existing wall on-site. Two systems, the Maxi Frame and Maxi Light, accommodate all needs. Both systems use the same concept but with a different type of frame:

## Maxi Frame

uses a load-bearing perimeter frame designed to be hung directly on modular brackets anchored to the wall;

## Maxi Light

uses vertical shaped profiles fixed to a traditional grid of uprights and cross-beams fixed to the wall.

### Direct Bonding

Plane material is the perfect solution for direct bonding on the exterior of a building, over cement panels, or cement backer board units. Walls need to be clean and free of dust, dirt, oil, grease, sealers, curing compounds, laitance, efflorescence, form oil or loose plaster, paint, and scale. Walls should also be sound and conform to good design and engineering practices.

Due to the potential for thermal expansion, contraction, and vibration, it is recommended to use a two-component cementitious mortar with an ISO 1307 classification of C2S2, for improved bond and deformability.

Stainless steel hooks (i.e. RAI-FIX\*) should be applied on the back of porcelain panels as a mechanical support in case of tile detachment. The number of hooks per slab and the type of fixing devices have to be determined according to the dimension and weight of the slab and the characteristics of the wall support.

When installing, use mechanical edge-leveling systems, which assist in the installation of the porcelain panels to reduce the effects of lippage, and subsequent “wall-washing” effect.

Proceed with the groove on the back of the slabs with the use of the grinder RAI-CUT\*, respecting the instruction enclosed with it. Verify the integrity of the porcelain panels and make sure the groove has been done correctly. Clean off any traces of oils or greases from the hook. Apply to hook and make sure it is completely inserted in the groove. Proceed with double spreading glue over the backside of the porcelain panel and the wall. Fix the hook to the wall with a screw anchor or a nail gun.

Field movement joints are required within tile installations. Expansion, construction, and contraction joints should be carried through the tile without exception. Refer to the most current TCNA handbook Method EJ171.

\*For Raimondi Tools (RAI-FIX, RAI-CUT), please visit their website, [www.raimondiusa.com](http://www.raimondiusa.com).

## **PLANE: THE NEXT GENERATION OF PANELS, MADE IN ITALY**

**PLANE** features state-of-the-art gauged porcelain panels that can be as large as 60" x 120" and as thin as 1/4" thick. These revolutionary large format tiles combine the durable characteristics of porcelain with the beauty of a natural slab of quarried stone or the charm of stained concrete. With a new formulation allowing for slimmer, more light-weight, no-mesh panels, Plane is perfect for an endless variety of projects. The Italian Plane collection features dozens of stunning colors, including six new colors, allowing for maximum design flexibility in both commercial and residential settings.

Gauged porcelain panels, **made in the USA.**

**CALACATTA ORO / STATUARIO VERO / STATUARIETTO / BIANCO CARRARA  
TAJ MAHAL / GREY STORM / SIERRA GREY / WHITE PEAK**

# THE NEXT GENERATION OF PANELS

StonePeak is a pioneer in the development and production of large, slim and lightweight porcelain panels. These revolutionary panels give a fresh look to continuous surfaces and combine the durable characteristics of porcelain with the beauty of a natural slab of quarried stone or stained concrete.

Through concentrated research and state-of-the-art technology, StonePeak has patented the first 60" x 120" large porcelain panel of its kind. The new formulation of raw materials allows for a slimmer, more light-weight, full-bodied panel with no fiberglass back netting.

StonePeak's breakthrough panels can clad just about anything, from shower surfaces to bedroom walls to shopping mall floors. The made-in-America **Plane 2.0** collection features eight stunning colors, allowing for maximum design flexibility in both commercial and residential settings.

**Imagine the possibilities.**

# FACTORY ADVANCED COMPREHENSIVE TRAINING

As large as 60"x120" and as slim as 6mm, porcelain panels are ideal for an endless variety of commercial and residential projects, but contractors require training before handling the material. Factory Advanced Comprehensive Training, or **F.A.C.T.**, is the only manufacturer-offered course that provides both classroom and hands-on instruction on how to handle, fabricate and install porcelain panels. **F.A.C.T.** is held in our manufacturing facility in Crossville, Tennessee. For more information, contact **FACT@StonePeakceramics.com**.

# CARE & MAINTENANCE

## Initial Cleaning During Installation

As with any flooring material, the most important step in the care and maintenance of your porcelain floor is the initial cleaning.

The complete removal of setting material, grout residue, and any construction residue from the surface of the tiles, before they have a chance to dry, is always the paramount first step. In most cases, StonePeak Ceramics porcelain tiles can be cleaned by scrubbing the installation with a neutral detergent cleaner followed by a thorough rinsing. If grout residue still remains, rinse further, cleaning the tile several times with clean water to be certain you have removed traces of grout residue from the surface of the tiles.

Grout manufacturers have printed detailed instructions for the proper cleaning of grout residues. The grout manufacturers' directions should be followed if grout film is present on the surface of the porcelain tiles.

Once the initial cleaning process has been completed, StonePeak Ceramics porcelain tiles just need to be swept or vacuumed and damp mopped with a neutral detergent cleaner followed by a thorough rinsing.

## Special Grouting Precautions

It is recommended that a test patch be done prior to grouting the installation to determine if contaminations of grout pigment will occur on the tile—especially when using light-colored tiles or polished tiles that are to be grouted with a dark contrasting colored grout, or when dark-colored tiles are to be grouted with a light-colored grout. If discoloration does not occur on the surface of the tile, then proceed with grouting. If discoloration does occur, contact the grout manufacturer to request a proper procedure for the protection of this surface.

---

### Please note:

- StonePeak highly recommends the use of low VOC, non-hazardous, and non-polluting products for the cleaning and maintenance of tile and grout products.
- Acid washing is rarely recommended. Acid or acid based cleaners should not be used to clean a grout residue. Some acids can burn non-epoxy or cementitious grouts and leave a white film that is almost impossible to remove. Also, the use of certain acid solutions can structurally weaken the grout in the joint of the tile. If in the event a mild solution of sulfamic or phosphoric acid base cleaner is needed, carefully read the manufacturer's instructions.

## Proper Care During Construction Phase

Like any other finished material, StonePeak Ceramics porcelain tiles are viewed as a finished flooring material. We strongly recommend using a protective cover, such as cardboard, construction paper, plywood, and/or other covering, to protect the porcelain tile during the initial construction phase. The use of plastic as a cover is not recommended since plastic becomes slippery when construction residue comes in contact with it. In addition, plastic has a tendency to delay the natural curing process of the thin-set and/or grout.

## Glazed, Matte, Honed & Textured Tiles

StonePeak Ceramics porcelain tile products do not require the use of sealers, surface coatings, or waxes on the Glazed, Matte, Honed, and Textured porcelain tiles. In fact, the surface of the matte series is so smooth, and non-absorbing, that Stain Test results show that StonePeak Ceramics porcelain tiles are virtually stain resistant. Applying a sealer or surface coating to matte finish porcelain tiles will only add unnecessary steps to the overall maintenance program—without enhancing the overall appearance of the tile. The use of sealers on impervious porcelain paver tiles will turn a low-maintenance tile into labor intensive high-maintenance tile, and in most cases, these applied surface sealers will change and/or diminish the slip resistance of the porcelain tile.

## Polished Tiles

If a polished finish is used in an area prone to excessive spills or dirt, it may be advisable to treat the tile with a penetrating-type sealer.

During the polishing process, microscopic pores are sometimes exposed. Although the pores are shallow, spills can fill them, making standard cleaning procedures inadequate. By using a penetrating-type sealer, microscopic pores are filled, preventing stains from setting in. A penetrating-type sealer is designed only to fill pores, not to coat the tile surface.

You will not alter the polished tile's appearance, provided that a recommended sealer is used and applied according to manufacturer's instructions.

# RECOMMENDATIONS GUIDE

## Daily Maintenance

As with any flooring material, general maintenance and cleaning varies depending on the surface, texture of the tile, and surface contaminant. Generally, neutral cleaners are more than sufficient to clean and maintain StonePeak Ceramics porcelain tiles. It is important that the cleaner used is a non-oil, non-soap, and non-animal fat-based product. These cleaners have a tendency to act like a magnet and attract dirt and dust, due to the residue build-up left behind during the clean up. Water and a soft sponge will remove most contaminants from your porcelain tile. If a cleaning product other than water is used for general cleaning, only a neutral pH cleaner (with the characteristics described above) should be used. These neutral pH cleaners are available from most sealer manufacturers and can be found at a local hardware store or tile distributor. Cleaners, such as Formula 409, Fantastic, or Windex, can sometimes be used on unsealed tiles, but most are alkaline in nature and could attack the surface finish. If using such a cleaner, always test a small area first. If you are not able to remedy the situation using the materials above, refer to the Heavy Duty Maintenance section of the Recommendations Guide.

## Heavy Duty Maintenance

If contaminants occur due to more than daily routine activities, then the use of a stronger cleaner may be needed. Use caution when selecting a heavy duty cleaning product. Some chemicals can damage the installation and may discolor and stain certain types of tile. Porcelain tiles are the most durable tiles available; however, we do not test every chemical, and therefore a test area is needed to confirm that the product is suitable for the removal of the contaminant in question. Please refer to the Stain Removal Guide for information about particular stains and manufacturer information. The information listed is only a guide. For more specific information, please contact one of the manufacturers listed. Always follow the directions from the manufacturer of the cleaning product you intend to use.

# STAIN REMOVAL GUIDE
